

# BRIGHTPICK

AI-powered robots to easily automate every stage of ecommerce and e-grocery order fulfillment.

Replenishment and putaway 1

In-aisle robotic picking 2

Goods-to-Person picking 3

Order consolidation, buffer and dispatch 4

## Suitable for:

Groceries >0 C

Ecommerce

Pharma

Medical

CPG

Electronics

Cosmetics

Fashion

Spare parts

Retail

## Available as:

RaaS

Capex

# Why Brightpick

Fast

Brightpick automates the entire fulfillment process including order picking, consolidation and dispatch, as well as stock replenishment.

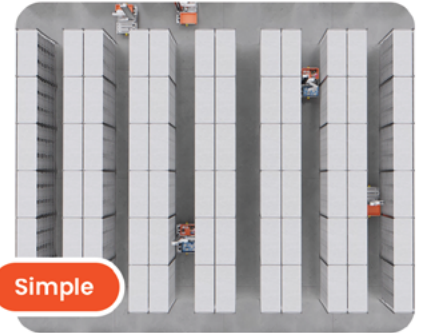

- In-aisle robotic picking eliminates human picking errors, maximizes labor savings and cuts picking times by 30-50%.
- Goods-to-Person picking stations for non-robotically-pickable items achieve 350+ tote presentations per hour.

Reliable

The solution has no single point of failure and can operate 24/7 without interruption.

- Each robot operates independently and can be easily replaced.
- Easy and low-cost maintenance with proven 99.5% uptime.
- 24/7 remote customer support with optional on-site support as needed.

Simple

Brightpick robots work with standard shelving and totes and require no fixed infrastructure.

- Easy to install in existing warehouses and mezzanines.
- On-site installation time of weeks.
- No special floor flatness, fencing or fire safety requirements.
- LiDAR-based visual navigation; no QR codes, magnetic tape or wire guidance needed.
- Fast integration with existing IT systems via simple API exchange.

## Benefits

### Improve profitability and offer customers better prices.

Cut your fulfillment costs in half by reducing labor and improving efficiency.

### Increase customer satisfaction.

Eliminate human picking errors and reduce returns and lost inventory.

### Simplify your operations.

Automate your entire fulfillment process with a single easy-to-install solution.

### Grow your business without growing your workforce.

Reduce labor needs for order fulfillment by more than 95%.

### Ship orders faster.

Pick orders faster and ship larger volumes from the same warehouse.

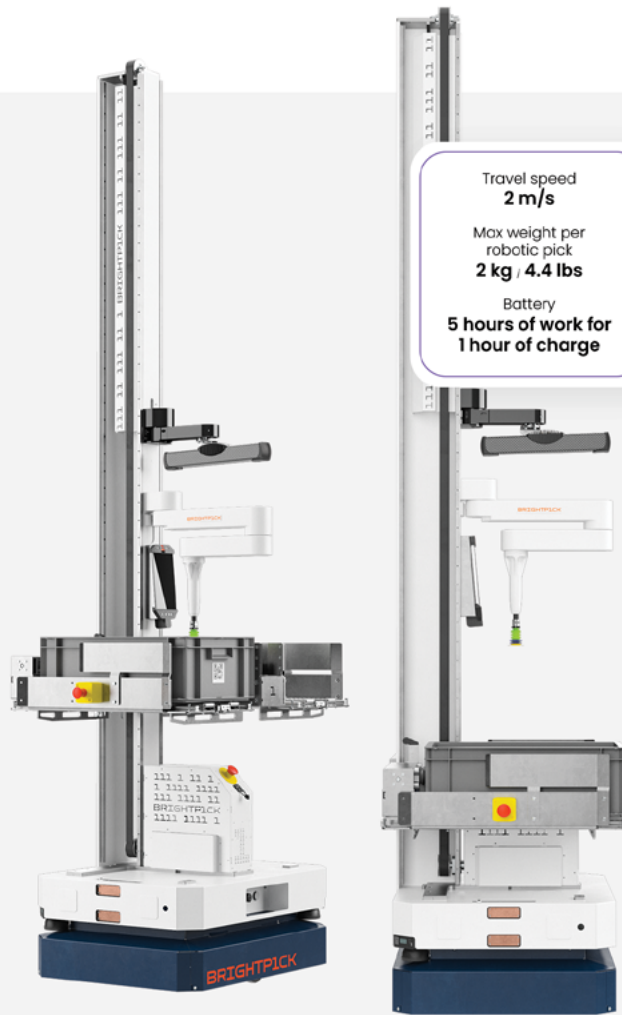

### Minimize business risk.

Reduce upfront costs and risk by scaling the automation gradually.

## Robots

- Brightpick Autopicker is the only mobile robot in the world that robotically picks and consolidates orders directly in the warehouse aisles.
- In addition to in-aisle robotic picking, Brightpick Autopickers also come with Goods-to-Person picking capabilities for heavy or oddly-shaped items.
- The robots find the nearest human picking station to complete a pick if needed, ensuring there is no single point of failure in the operation.
- In addition, Brightpick Autopicker can also do stock replenishment, pallet picking, dynamic slotting, order consolidation and dispatch.

## Storage

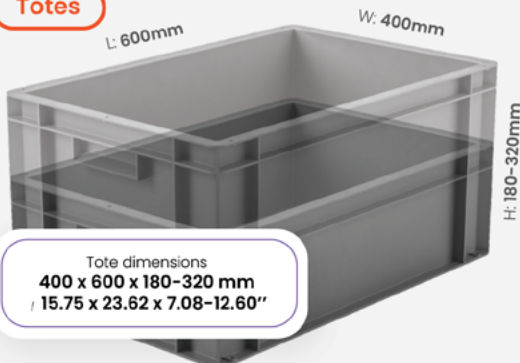

Brightpick robots work with standard non-proprietary shelving and totes.

### Shelving

- Standard shelving that can be installed in days.
- Quick and immediate access to all SKUs.
- No special flooring or fire safety requirements.
- Easy to install in existing brownfield facilities and mezzanines.

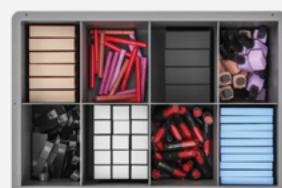

### Totes

**Robotic picking**  
(max 2 split sections)

**Human picking**  
(max 8 split sections)

# Trusted by leading grocers, retailers and 3PLs worldwide

**Brightpick** enabled us to install end-to-end **automation without major changes** to our existing warehouse processes. Their solution practically **eliminated our picking labor** and **reduced costs**.
